

COVID-19, snake venom and Metadichol (NANO SOMA)

[Dr. Bryan Ardis](#) has, in my opinion, brought forth unequivocal evidence that what we know as COVID-19 is actually poisoning using snake venom, most likely administered by the contamination of global water supplies, augmented by the so-called “drug”, Remdesivir, which appears to be the same venom, delivered in hospitals and possibly elsewhere, apparently to kill people. Further, the banned treatments Hydroxychloroquine and Ivermectin are totally effective in treating this condition. Bizarrely, smoking provides protection because it is the nicotine receptors in the brain that these venoms target. This was noted with COVID-19 and now we know why.

Ardis says he has spoken to many people who use well water on their properties to get their household water. This is very common in large parts of the US outside of the densely populated areas. In no situation, when the family uses well water and were unvaxxed, has he found a case of COVID-19.

There are also reports of inexplicable [long, white, fibrous clots](#) being found in veins and arteries during autopsies. This phenomenon is known to occur as a result of [certain snake venoms](#). How would a virus be producing this condition?

The US [was late to the party](#) to use Remdesivir – October 22, 2020. By then Japan, the UK, South Korea, Taiwan India, Singapore, Israel, the EU and Australia had approved it.

Dr. Palayakotai Raghavan (Raghu), an organic chemist and the developer and patent holder of Metadichol, the core ingredient in the food-based products NANO SOMA, METASOMER Topical Gel and METASOMER Telomerase Natural Skin Cream that my MagicDichol companies distribute, has examined the papers Ardis refers to below and is satisfied that what Ardis claims is totally valid and makes sense of some of the unexplained elements in the COVID-19 saga. Further, Raghu worked on ACE inhibitors at NOVARTIS. ACE inhibitors are all (except Metadichol) made from snake venom, so he is well familiar with the science. Some people have claimed that water contamination argument doesn't - ahem... – hold water, since the stomach will neutralise these spike proteins. Raghu says these proteins can be absorbed to an extent by the body before reaching the stomach and you don't need the full exposure to trigger a toxic reaction.

In response to Dr. Ardis' revelations about the possibility of snake venom peptide delivery via water systems, there has been almost derision from certain influencers who claim that snake venom wouldn't be stable in municipal water systems. In effect, they are claiming that tap water is anti-venom.

Nanocarriers can stabilize snake venom peptides for delivery via water. The National Library of Medicine has published a study that reveals the existence of “nanocarriers”, which can stabilize snake venom peptides in order to achieve delivery via water systems.

Entitled, “[Nanoparticles Functionalized with Venom-Derived Peptides and Toxins for Pharmaceutical Applications](#)”, the study abstract explains the mechanism by which snake venom peptides (including the 19 dangerous spike proteins) are stabilized in water and other solutions. Snake venoms have been very thoroughly analysed over the last 40 years or so and are the source of [a range of pharmaceuticals](#), so their properties and the infrastructure and tools to work with them are well established.

[This interview with Stew Peters](#) provides an introduction to what Bryan has shared.

A more detailed description can be found in this 3-part interview with Mike Adams:

Part 1 <https://www.bitcute.com/video/P6lCkSzEAPZg/>

Part 2 <https://www.bitchute.com/video/1qu9s8osvr2K/>

Part 3 <https://www.bitchute.com/video/JC3r0xKDtGEx/>

This is profound information and, if you watch these interviews, you will see these are divinely guided revelations.

I encourage you to assess this material for yourself and form your own view.

The spike proteins being introduced into people's bodies are found in cobra venom and that of other venomous snakes. Snake bites lead to increased D-Dimer, which leads to blood clots, as observed in COVID-19 cases and those "vaccinated" for it, and NANO SOMA in many testimonials acts as a blood thinner and reduces D-Dimer levels.

Also, many people say NANO SOMA helps them sleep. That is because they are producing Melatonin. Melatonin is a powerful inhibitor of the spike protein from Cobra venom. For Melatonin production, the presence of Vitamin C is critical and NANO SOMA does this by increasing Vitamin C levels. Ardis suggests that the lower susceptibility to COVID-19 seen in children is because children have higher levels of Melatonin than adults.

Also, one of the genes expressed by NANO SOMA is MPO, which produces hypochlorous acid and this degrades spike proteins and clears graphene oxide. NANO SOMA also increases the gene GSH, which produces Glutathione, which also clears the spike proteins. These mechanisms explain how NANO SOMA counteracts these effects of the vaccines.

COVID-19 may be an acronym for the 19 venomous spike proteins found in these venoms and **Cobra Venom Induced Disease**.

If this information is accurate, which I believe it is, we are beginning to see a deeply evil plan exposed.

Please understand that neither I nor any of the companies supplying any of the Metadichol-based products nor the companies' directors, shareholders nor employees are medical doctors and do not provide medical advice. For medical advice, please consult your medical practitioner. Further, these products are not intended to diagnose, treat, cure or prevent any disease. Rather, they trigger the body to heal and take care of itself in ways we never imagined were possible.

Dr. Richard Presser
