

Examples of people using NANO SOMA® to prompt the body to clear the effects of the COVID-19 jabs

Disclaimer

Please understand that neither I nor any of the companies supplying any of the Metadichol-based products nor the companies' directors nor shareholders are medical doctors and do not provide medical advice. For medical advice, please consult your medical practitioner. Further, these products are not intended to diagnose, treat, cure or prevent any disease. Rather, they stimulate the body's natural healing mechanisms, which are far more comprehensive than most of us appreciate.

What does someone who has been jabbed need to do to benefit from NANO SOMA?

5 sprays of NANO SOMA in your mouth every 4 hours for 7 days. If you have a pre-existing health condition, at the end of 7 days, change to 5 sprays 4 times/day until the condition is cleared, then 5 sprays once/day. See <https://usage-protocol.thenanosoma.com/>.

For more details, see <http://jabresp.metadicholnano.com>.

The following are testimonials from people who have prompted their bodies to clear the jabs with NANO SOMA.

—

My Broken Heart

I recently arranged to meet my new friend, Mike, who I met at the Truth Be Told Rally – a gathering to honor those injured or who sadly died as a result of the COVID-19 vaccine. We had a lovely time talking things through. My girlfriend joined us and explained in great detail about how NANO SOMA saved her life on many occasions and continues to help her to this day.

Strangely, however, I felt very uneasy around my heart and chest area that day. On our way home, I felt really strange – I was hot and cold and anxious. My heart felt fluttered and I wasn't acting normal. I was beginning to panic.

When I got home, I jumped out of the car and ran upstairs to a quantum device that I used against my heart. I felt sick for days and wasn't getting better. I was even throwing up water. Dr. Raghu offered to send me a few bottles of NANO SOMA.

During this time, it felt like the left side of my heart could not fully pump blood around my body. I felt sick, dizzy, and so scared. I was advised by Dr. Raghu to use a protocol that involved more frequent use of the five-spray dose. I used NANO SOMA every three hours and sometimes more.

I have a scanner machine that told me I had left ventricular heart disease, which apparently usually results in surgery or the use of technology fitted to the heart.

However, after three days of using NANO SOMA, my results cleared and the issues in the left ventricle of my heart were fixed. I've been talking and sharing stories about NANO SOMA – I never thought I would become one of those amazing testimonials!

Thank you, NANO SOMA, for healing my broken heart. Love and light X

Anon., January 2023

On January 3rd, I was admitted to Warwick Hospital with chest pain and wheezing. I hadn't eaten for five days and was very weak. My D-dimer results came back positive and I had a pulse of 140 bpm. The doctors felt strongly that blood clots had returned to my lungs, so I remained in the hospital for two days while I waited for a CT scan.

I refused the injections of their blood thinners and I started taking NANO SOMA, which I had taken with me in my hospital bag. I started getting stronger and began to eat and drink. I started feeling like myself again and like the life was coming back to me. By the time I had the CT scan, there were no signs of clots and I was able to go home. NANO SOMA is an absolute miracle and my partner and I feel very blessed to have found it. We are so unbelievably grateful to Dr. Raghavan for creating it. It has saved both of our lives on more than one occasion. We are both living proof of the power of this absolute miracle product.

Anon., January 2023

I took the AstraZeneca vaccine January 21st, 2021. On April 23rd, 2021, I was diagnosed with multiple acute pulmonary embolisms. I was then put onto blood thinners, which held the clots in place but could not get rid of them. Just six days after this, I was fighting for my life in the resuscitation room following a huge internal bleed that caused me to lose nearly all of the blood in my body.

Knowing that time was not on our side, my partner Daniel started desperately searching for a cure for the blood clots and a way to get this vaccine out of my body. He came across a number of incredible organic alternatives, one of them being NANO SOMA. I started using NANO SOMA on a regular basis and I started to get better.

We trusted in nature and I came off of my blood thinners. A few months later – to the astonishment of the doctors – I had a negative D-dimer result. Finally, in November, a CT scan proved that the clots had been completely eradicated from my body. I am living a normal and happy life now, and we hope that this brief story will encourage others to trust in this product. As stated on the NANO SOMA website, this product isn't used to treat any illness. It is used to activate your body's own immune system to take care of itself. This was my journey. Have faith, everyone.

Daniel Knowles (sent on behalf of his partner), July 2022

I was working as a carer when the whole COVID-19 thing kicked off. I believed it all and went along with the testing and masks, etc. I was called up early and took the AstraZeneca vaccine on January 21st, 2021. Around this time, I went into an alcoholic relapse after eight years of sobriety and started to become physically unwell.

In February, I became very wheezy and breathless and felt generally very unwell. By March, I was struggling to get up the stairs and would have to stop to catch my breath. I began being taken by the ambulance to the hospital. They would take chest X-rays and run blood tests, but no one detected the clots as they weren't giving out D-dimers (I didn't know what a D-dimer was at the time). I was diagnosed with multiple infections.

The ambulance trips to the hospital became very regular.

I was diagnosed with tachycardia in early April. On April 16th, I had a kidney failure which I was told was caused by a urinary tract infection that was so bad it attacked the kidney. I do not believe that this was the case.

On April 23rd, the blood clots were detected at City Hospital in Birmingham. They started injecting me in the stomach with blood thinners and told me to come back the next morning for a CT scan. The CT scan revealed blood clots in all zones of both lungs. I was put on Rivaroxaban.

I went to Exeter to stay with a friend. I had bruises all over my legs and felt unwell. On April 30th, I went to the GP who said they detected an infection in my urine and gave me antibiotics. For about a week, I was suffering bad heartburn, which is something I never usually had. By late afternoon, my stomach started to become very hard and large. I looked six months pregnant. I felt very dizzy and found it hard to walk.

After a while, I felt sick and started throwing up massive amounts of pure coffee-grain blood into a bucket. My friend called an ambulance that took me to Royal Devon and Exeter Hospital. Not long after I arrived, I suffered a second massive hemorrhage – this time of pure, bright red, fresh blood. I was raced into the resuscitation room and worked on throughout the night to save my life. A camera test on the following day showed no alcohol damage and a one-centimeter esophageal ulcer with a clot in the base which had ruptured. I spent a week in a critical care ward before coming home to Birmingham.

At this time, I grew close to Daniel who had been a childhood friend. He knew all about the vaccine and what was in it. I told him about my near-death experience and my blood clots. He started researching nonstop for a cure, and it was during that time that a man told him about NANO SOMA. We ordered it and I started taking it. I started getting better. I eventually stopped taking Rivaroxaban without the doctor's knowledge and we went fully organic with everything. I stopped all pharmaceutical medications, including Propranolol and Mirtazapine. We began to enjoy life and started going camping and socialising with friends.

In November 2021, to the doctor's astonishment, a D-dimer test result showed negative. The doctor said it must mean that the Rivaroxaban is doing its job. I hadn't told him I'd stopped taking that months ago.

In January 2022, a CT scan revealed that my lungs were clear and my D-dimer had remained negative.

We have come so far thanks to the miracle of NANO SOMA. I would have lost my life without it, and now I have another chance to be a mum to my two beautiful children.

We can't thank you enough, Dr Raghavan, for creating this life-saving miracle. We are trying to encourage our family to take it, as we know it gets rid of the vaccine and the vaccine damage. My mum has started to use it and my eldest daughter, as well. We will continue to tell people about how incredible it is. We will always be forever grateful to you. Thank you.

Holly, July 2022

I would like to talk about my experiences with the COVID-19 vaccine, and its side effects. Currently, I am studying "social-og Sundhedsassistent", which is in the healthcare field. Because of that, I chose to get vaccinated to protect the elderly citizens I assist. I've always been healthy and rarely been sick.

On February 23rd in 2021 I got my first shot of the vaccine made by AstraZeneca. Shortly after, I experienced major dizziness and became sick with fever, shortness of breath, muscle pains, pain in the lungs, chills, and general pain – at this time I was sick for about a week and a half. Afterward, I got my second and third shots where I became sick again, though not quite as bad.

I got my third shot on November 21st, 2021. In the period between my shots, my natural immune system was weakened. As of this writing, I have been sick about 4 times over the last 3 months and have begun taking NANO SOMA, because of my weakened immune system. NANO SOMA began working already the first day after. Now, a week after, I feel healthy and don't feel any sickness.

More updates are to come after I have taken NANO SOMA for some time.

Elvah, December 2021

In late August 2021, I had my first vaccine (Pfizer) at a Newtown location in Sydney. That same day I felt fine. The following day, I struggled to get out of bed. I had a headache, aches and pains and severe chills from which I was not able to get warm. I remained in this condition for two days.

On the third day, I felt some recovery. I've not suffered from any other conditions and/or felt this way ever before. On hearing about NANO SOMA and its ability to promote the body's natural defences, I was interested to try this product and look for a way to assist in reducing the effects of the Pfizer jab

as I was aware from discussions with others that, with the second jab, I could suffer similar symptoms, if not worse.

I was guided on the use of NANO SOMA. I received it two weeks before my second Pfizer jab and took a morning and evening dose. Knowing I had another jab coming caused some anxiety. I fronted for my second dose and went back to work expecting I would not be up and around on day two. Day two came and I was so surprised – I was able to get up, shower, and get to the office with no symptoms or side effects from the second vaccine. I was so elated that I was not bed-bound.

On continuing to take NANO SOMA, I have also lost a little weight, too. I'd recommend this product to anyone and my experience in using this has shown me that this product can cancel out the terrible side effects of the vaccine. I'm most appreciative of being introduced to it.

Many thanks. Best regards,

Matthew, November 2021

Hi Richard,

Unfortunately, I had the first Pfizer COVID-19 injection. Within minutes I felt lightheaded. And, 24 hours later, I broke out in itchy burning hives which lasted for seven weeks (until I started NANO SOMA). The doctors had me on 60 mg of IV antihistamine. Two others prescribed oral antihistamines with no prevail. Then, a friend suggested NANO SOMA.

(Drum roll.)

48 hours later I woke up and noticed a shift. I was not burning or itching or even breaking out in hives. I am so elated.

Silvana, April 2021
